Walter Brazil Opens Chemical Tools Lab and Production!

In April 2002 we began the first local production of our winning Chemical Tools: Spatter Block™, Spatter Block HT™ and Gold Matrix™ at our new Brazilian production facility and applications lab, Walter CB Química e Biotecnologia, in Sao Paulo. Other products will soon follow.

The stand-alone building has an area of 600 m2 (6,500 sq. ft.) with production on the ground floor and the laboratory and training facilities on the top floor. The new facilities are giving a great push to our sales, as they substantially increase our flexibility in providing customized services, solutions and new developments.

One of the most important features is the laboratory, which will be extensively used for training purposes. We are developing new product seminars for our own sales force, our distributors' personnel, as well as for our end-users.

The construction of this plant is a considerable investment that the Walter Group is making in this market. Our customers will be the ones benefiting the most from this endeavor. This is yet another demonstration of our ongoing commitment to contributing to our customers' success by helping them work better.
