Big plans for WALTER at Max International

Visitors to the upcoming Max International Expo (formerly AWS) will find not only the largest assembly of welding and fabrication equipment in the world, but also the largest and most active WALTER display area ever assembled in the U.S. New Abrasives and Chemical Tools products will be introduced and shown in continuous live demonstrations performed by WALTER factory trained direct sales representatives.

Within a spacious 20'x30' island booth, the WALTER marketing team is planning an entirely new booth arrangement featuring six separate product highlight sections for WALTER Abrasives and Chemical Tools. There will be active product demonstrations featuring Enduro-Flex™, the world's only trimmable flap disc, Quick-Step™ and Line-Mate™ finishing systems and Surfox™, the most advanced weld cleaning system available today. Every major product group will be displayed and demonstrated by the WALTER sales team.

Come see the experts and learn about the latest in Abrasive and Chemical Tools technology created to meet the application needs of the metal fabricating and finishing industries.
